# Catch the Speed of Innovation: AI-Driven Core Modernization

The landscape is changing rapidly. AI is accelerating the pace of business, and core systems need to keep up.

The risk of inaction is significant. The opportunity lies in embracing this speed strategically.

AI-driven core modernization provides the tools and methodologies to modernize your core with agility and minimal disruption, allowing you to capitalize on the future, today.

# Speed of Innovation

Global monthly web visitors to AI chatbots

Note: Estimated unique visitors across mobile and desktop web as of March. For standalone chatbot sites only.  
Source: Similarweb

# Speed of Innovation

## Capital spending, quarterly

\$75 billion

Note: Data reflect purchases of property and equipment. Chart shows figures for each calendar quarter. Microsoft's fiscal year ends June 30.

Source: the companies

# Speed of Innovation

Intelligence scores for each developer's top-performing model as of the second quarter of each year

\*These scores are estimates using publicly available metrics due to lack of API access or other benchmarking barriers  
Note: Based on Artificial Analysis's intelligence index, which has a maximum score of 100. Data for 2025 are as of April 10.  
Source: Artificial Analysis

[https://www.wsj.com/tech/ai/ai-boom-companies-afb8c7e0?st=Z4eScz&reflink=desktopwebshare\\_permalink](https://www.wsj.com/tech/ai/ai-boom-companies-afb8c7e0?st=Z4eScz&reflink=desktopwebshare_permalink)

In the not-too-distant future, many models might have equal intelligence in areas where they are needed. Then the fight becomes about cost, speed and reliability.

# Usage of AI

## Consumer AI

Industry Shift

## Enterprise AI

### Focus:

- Personalization, convenience, entertainment, and improving individual user experiences.

### Examples:

- Virtual assistants like [Siri](#) or [Alexa](#), recommendation systems on streaming services, and home automation systems.

### Key Characteristics:

- Standalone applications, focus on individual tasks, and generally operate on a smaller scale.

### Focus:

- Streamlining business operations, improving productivity, enabling data-driven decision-making, and achieving organizational goals.

### Examples:

- Fraud detection systems, supply chain optimization, customer relationship management (CRM) tools, and workforce management systems.

### Key Characteristics:

- Integrated with business systems, handles sensitive data, requires scalability and robust security measures, and directly impacts business outcomes.

# Feature Set of AI

| Feature      | Industry Shift                              |                                                                  |
|--------------|---------------------------------------------|------------------------------------------------------------------|
|              | Consumer AI                                 | Enterprise AI                                                    |
| Target Users | Individual Consumers                        | Businesses/Organizations                                         |
| Focus        | Personalization, convenience, entertainment | Business process optimization, efficiency, data-driven decisions |
| Scale        | Smaller, standalone applications            | Larger, integrated systems, handling large datasets              |
| Data         | Personal and often less sensitive data      | Sensitive and proprietary business data                          |
| Integration  | Limited integration with business systems   | Deep integration with existing business systems                  |
| Impact       | Enhances individual experiences             | Directly impacts business performance and outcomes               |

# Digital Modernization TAM: US\$ 2T growing ~15%

Massive Opportunity, companies struggling to leverage new tech for innovation, automation and competitive edge

Data source : Gartner, IDC, others

Fragmented market, revenue of top 10 is ~US\$ 230B

Smaller providers unable to scale or manage tech shift leading to a massive demand supply gap

# *AI* led Enterprise Modernization

Founded in April 2024

# The Founders

- Leadership of \$15Bn revenue, 100+ countries in large global technology majors
- Microsoft, HP, Dell, EMC, NetApp, Intel, Zebra, Redington

## Rajiv Srivastava, CEO

Global leader with 35 years corporate and board expertise of leading business transformations in 100+ countries across diverse industries – technology, supply chain, energy

**Former Global MD & CEO – Redington Ltd (listed)**  
**Former MD & CEO – Indian Energy Exchange Ltd (listed)**  
**Former MD – HP India**  
**Former COO – HP Inc Asia Pacific & Japan (Singapore)**

**Focus:** Creating hyper growth vision-strategy-execution frameworks, building high performance team, operational excellence and global stakeholder relationships.

## Ankur Sharma, CTO

Business technology leader with 20 years of experience at tech, fintech, mobility companies building data-driven innovative AI/ML enterprise cloud products that drive business objectives and achieve successful outcomes.

**Former Founder & CEO – TaxSpanner, a startup sold to Zaggle (listed)**  
**Former VP&GM – Mode Mobile (USA), Formerly at Intel (USA)**

**Focus:** Software Engineering, AI, cloud, data transformation, ERP and CRM modernization, Analytics & insights

## Rajesh Janey, CRO

Transformational leader with four decades of experience in tech industry. Expertise in leading cross cultural, multi geo teams, leading transformation during M&A's.

**Former President India & SAARC – EMC**  
**Former President India & SAARC –NetApp**  
**Former MD India & SVP – Dell**  
**Former Advisor – Tech Mahindra**

**Focus:** M&A, Strategic planning & execution, GTM acceleration, partnerships and alliances, Services, P&L management.

## Rajnish Gupta, COO

30+ years in the IT and Automation business in India. Expertise in B2B, B2C and Omnichannel, Alliances, Distribution, Operational Excellence, Supply Chain. Industry body outreach to Govt through MAIT, AMCHAM

**Former VP&Head – Zebra Technologies (High tech MNC)**  
**Formerly, Head of Sales at HP India**

**Focus:** Sales strategy, Supply Chain Automation, Customer 360, Partnerships, Operations

## CoreOps.AI has \$3.5m in New Round

**New Delhi:** Enterprise software startup CoreOps.AI has raised \$3.5 million in a pre-series A funding round led by Siana Capital Management, with participation from Kettleborough, Arora Venture Partners, and several individual investors. It plans to use the capital to expand its engi-

neering team, strengthen product development, and scale its AI-based modernisation platform for large enterprises. The startup builds tools to help organisations modernise legacy technology systems, and automate operational workflows.—Our Bureau

## Our Vision

“CoreOps is building the AI operating system for enterprises - accelerating modernization time by 50% and cutting costs by 25% through intelligent automation, data orchestration, and legacy transformation.”

## Our Ambition

Category leader in AI enterprise modernisation

1. Build a world leading AI company from India
2. Deliver 100x value creation over the next 5 years

# What are we solving for

**Modernization without disruption. AI at the core.**

- Enterprises are sitting on decades of legacy systems that are costly, slow to evolve, and a barrier to digital transformation. 70-80% IT spend goes towards maintaining legacy systems, not innovation
- Data siloes remain a top barrier – 85% organisations can't access critical data across systems in real time
- 50% enterprise processes remain manual – slower execution and higher costs
- Enterprises lose about 30% revenue due to operational inefficiencies

CoreOps injects intelligence into existing systems — without disruption — through AI agents to unify data, automate processes/workflows and provide predictive insights helping businesses reduce inefficiencies, accelerate decision-making and scale seamlessly

# We Operationalise AI, Accelerate Digital and Transform Legacy

*Modernization without disruption. AI at the core.*

**Our proprietary flexible and scalable AI platform** drives digital transformations 2X faster improving efficiency, cost and time to market

1. Agentic AI products to modernize enterprise core systems and automate workflows making us synonymous with the future of work. Specifically :
  - Modernise core systems of SAP, Salesforce, ServiceNow, Oracle and other legacy business systems
  - Core operations/workflow automation across the organisation – revenue operations, customer 360, intelligent supply chain, finance, HRMS, data analytics
2. Build and deploy AI solutions that solve real enterprise problems

**Agentic AI**  
approach cuts  
modernisation  
time by 50% and  
cost by 25%

Platform led repeatable, consistent approach improves efficiency, time to market, reduces cost

Two solid purple squares are positioned on the left side of the slide. One is a smaller square located higher up, and the other is a larger rectangle positioned below it, extending further down the page.

# Our AI Platform

# The solution : CoreOps Platform

- **AgentCore** : Autonomous agents to streamline business workflows and reduce human workload
- **DataCore** : Enterprise-grade data backbone to integrate, cleanse, and make data AI-ready
- **CoreSight & Aithra**: Unified intelligence layer for insights, observability, and governance

Together they form a modular AI-native modernization stack.

**AI powered modernization**  
2X faster

# Enterprise AI Platform : AI-powered digital agents for Enterprise Core Operations

A purpose-built AI platform that powers the full AI application lifecycle while cutting cost, chaos, and time.

GLOBAL LAUNCH: 24.07.2025

# AgentCRE

Integrated platform for AgentOps

# CoreSight: Architecture

# CoreOps Intelligent Enterprise Modernization

# AI-Augmented core operations

## Blend technology and data for insights

# Under the Hood: Our Tech Stack

## Open Architecture

- ❖ Python
- ❖ React
- ❖ Kubernetes
- ❖ Kafka
- ❖ SQL, NoSQL, Columnar DB
- ❖ Terraform
- ❖ Airflow
- ❖ Docker
- ❖ Ansible
- ❖ Prometheus

## Advanced AI/ML

- ❖ Machine Learning (ML)
- ❖ Deep learning
- ❖ Natural Language Processing (NLP)
- ❖ Computer vision
- ❖ Generative AI
- ❖ Reinforcement Learning
- ❖ Transfer Learning
- ❖ Edge AI

## Enterprise-Grade Security

- ❖ Zero-trust architecture
- ❖ GDPR and SOC 2
- ❖ Third-party penetration testing
- ❖ Data encryption
- ❖ Explainable AI (XAI)
- ❖ Federated Learning

Our platform's architecture reflects years of experience building enterprise-scale systems. Every component has been designed with performance, security, and reliability as primary considerations.

A decorative graphic consisting of two overlapping squares. The top square is a light blue color, and the bottom square is a darker blue color. They are positioned on the left side of the slide, with the top square partially overlapping the bottom one.

# CoreOps team and differentiation

# Our Presence

**85+**  
AI/EA Tech resources with  
~500+ years experience

**100+**  
Digital transformation  
projects

**2**  
global offices

**20+**  
AI Agent use cases

**\$15B+**  
Business leadership

**1**  
AI Platform

**40**  
EA Certifications

**30+**  
ERP, CRM projects

# GTM : differentiated approach, 90% direct to customer

# World class AI-led modernization company

## Top priorities

1. Accelerate customer centric growth – win & retain high value customers thru outcomes v/s just technology
2. Platform excellence
3. Build a high-performance leadership team, culture
4. Operational & financial discipline
5. World best company

# World Best Company ....

# CoreOps.AI and We!!

**A trusted partner that enables enterprises across the world to transform with AI led modernisation and drive operational efficiency, innovation and growth**

Catalyse a new category - AI led modernisation

Be the no. 1 platform in the world for building AI agents

Deliver impact at scale, be the most admired organisation

**EMPOWER**

**COACH**

**LEAD BY  
EXAMPLE**

# Leadership Starts Before Your First Job

Leadership isn't waiting for you in a corner office—it's built in every choice you make today. It's about influence, initiative, and collaboration — not titles or hierarchies.

## The Myth About Leadership

### Most People Think Leadership Begins

- When you get a promotion.
- Once you have a team reporting to you.
- After years of experience.
- Only in management roles.

### Reality: Leadership Begins When You Start

- By taking initiative on tasks.
- By helping colleagues succeed.
- Through continuous learning and adaptation.
- By influencing outcomes regardless of title.

**Leadership is a behaviour, not a designation.**

# Hackathons: The Ultimate Leadership Launchpad

Hackathons simulate real industry challenges and provide an intense environment to develop crucial leadership capabilities that employers value most.

## Time Pressure

Learn to prioritise ruthlessly and deliver results under tight deadlines.

## Ambiguous Problems

Navigate uncertainty and define clear paths forward when requirements are unclear.

## Diverse Teams

Collaborate with different personalities, skills, and perspectives effectively.

## Rapid Decisions

Make confident choices quickly with limited information and move forward boldly.

## Execution Over Ideas

Transform concepts into working solutions—because implementation matters more than perfection.

# Your Leadership Journey Starts Now

*"Leadership doesn't begin with a job offer—it begins with you."*

Every hackathon, every group project, every moment of initiative is a rehearsal for the leader you are becoming. The corner office is not the office is not the destination—it's just another stage.

**True leadership starts before your first job, and it never stops growing.**

## Problem # 1

# Retrieval Integrity Auditor for RAG Systems

Building trust and transparency in AI-powered document retrieval through comprehensive auditing and explainability.

# Challenge for Problem # 1

CONTEXT

## The Hidden Problem in RAG Systems

Retrieval-Augmented Generation (RAG) systems retrieve documents before generating answers. However, retrieval failures often occur in subtle ways that compromise answer quality and reliability.

Most systems evaluate only the final answer, but rarely evaluate the retrieval step itself. Enterprises need visibility into whether the correct evidence was retrieved before generation.

### Common Retrieval Failures

- Retrieve irrelevant documents
- Miss critical documents
- Over-rely on top-1 similarity
- Hide retrieval errors behind fluent generation

## Problem # 2

# AI-Powered Intelligent Data Migration Intelligence

Transforming complex database migrations through intelligent automation, explainability, and visual clarity

## Challenge for Problem # 2

### CONTEXT

# The Data Migration Challenge

Organizations frequently migrate data between databases due to cloud modernization, legacy system upgrades, ERP/CRM replacements, mergers and acquisitions, and technology consolidation. During these migrations, data must move from a Source Database to a Target Database, often with different schemas, renamed columns, changed data types, split or merged fields, and different constraints and relationships.

Traditional migration approaches rely on manual schema comparison, hard-coded scripts, and static rules, which are error-prone and difficult to audit.

### Migration Triggers

- Cloud modernization
- Legacy system upgrades
- ERP/CRM replacements
- Mergers & acquisitions
- Technology consolidation

## Problem # 3

# The "Hallucination Hunter": Automated Fact-Checking & Attribution for LLMs

Building an AI auditor to verify generated content against trusted sources and prevent costly errors in high-stakes domains.

## Challenge for Problem # 3

### CONTEXT

# The Critical Flaw in Modern AI

Large Language Models like GPT-4, Claude, and LLaMA have revolutionized content generation across industries—from drafting legal contracts to summarizing medical records. However, these powerful models suffer from a critical vulnerability: **hallucination**. They confidently generate plausible-sounding but factually incorrect information.

In high-stakes domains such as healthcare, law, and finance, a single hallucination can lead to malpractice lawsuits, financial loss, or dangerous operational failures. Organizations currently rely on expensive manual review to verify AI-generated content, which defeats the purpose of automation.

### Trust is the Bottleneck

Enterprise AI adoption stalls when users cannot fully rely on AI assistants without double-checking every sentence.

## Problem # 4

# Contextual Compression for Extreme Long Inputs

Enterprises deal with massive documents daily—policy manuals, audit logs, support transcripts, technical runbooks, and legal archives. Most AI systems can't process these enormous files at once due to limited context windows. The challenge: compress intelligently without losing critical information.

## Challenge for Problem # 4

### CHALLENGE

# The Real-World Problem

Enterprises routinely handle documents ranging from 500 to 5,000 pages. These include policy documents, incident reports, customer support transcripts, technical manuals, and compliance archives. Traditional AI systems and even human reviewers cannot process everything simultaneously due to cognitive and technical limitations.

LLMs have finite context windows, making it impossible to "fit" huge documents directly. The result? Critical information gets fragmented, lost, or misinterpreted during analysis.

### Common Document Types

- Policy documents (500-5,000 pages)
- Audit logs and incident reports
- Customer support transcripts
- Technical manuals and runbooks
- Legal and compliance archives

# SHAPE THE FUTURE

Thank You

# Next Steps

We Open the Hackathon here on.....
